**Web Development Techie | Ruhr**

---

Ahmed Jayousi completed the TechLabs Academy Track **Web Development** successfully with the final project **Make Me a Playlist!** and acquired thereby skills such as building a first interactive web application and got to know the Web Dev toolbox (e.g. HTML, CSS, JavaScript, React.js, and many more).

# Make Me a Playlist!

Choose between different moods and get a playlist tailored just for you!

---

The concept behind “Make Me a Playlist!” emerged from the realization that while platforms like Spotify excel at generating playlists based on users' existing music libraries, there was a gap in providing mood-based playlist curation. Users often desire playlists that match their current emotional state rather than just their past listening habits. This project aimed to address this gap by developing a solution that offers personalized playlists based solely on mood. To tackle this challenge, our team embarked on the development of a web application leveraging the Chat-GPT API. This innovative approach enabled users to select from a diverse range of moods and receive a bespoke playlist curated to match their chosen emotional state. By harnessing the power of artificial intelligence, we aimed to provide users with an immersive and personalized music listening experience.
